13 **FOR THE COUNTY OF ALAMEDA**

14  
15 PILLIOD, et al.  
16 Plaintiffs,  
17 vs.  
18 MONSANTO COMPANY,  
19 Defendant.

Case No. RG17862702

ASSIGNED FOR ALL PURPOSES TO  
JUDGE WINIFRED SMITH  
DEPARTMENT 21

**MEMORANDUM OF POINTS AND  
AUTHORITIES IN SUPPORT OF  
DEFENDANT MONSANTO COMPANY'S  
MOTION FOR NEW TRIAL**

Hearing Date: July 19, 2019  
Time: 11:00 a.m.  
Department: 21  
Reservation No. R-2087954

Trial Date: March 18, 2019

1 **TABLE OF CONTENTS**

2 **Page**

3 INTRODUCTION..... 1

4 ARGUMENT ..... 2

5 I. IRREGULARITIES IN THE PROCEEDING REQUIRE A NEW TRIAL..... 2

6 A. Plaintiffs’ Counsel Repeatedly Engaged in Prejudicial Misconduct..... 2

7 1. Misconduct During Closing Statement Requires a New Trial..... 3

8 2. The Prejudice to Monsanto From Plaintiffs’ Improper Closing  
9 Statement Was Compounded by Misconduct Throughout Trial..... 5

10 B. Joining Plaintiffs’ Separate Claims in a Single Trial Was Prejudicial  
11 and Erroneous..... 6

12 C. Local Pretrial Publicity Prevented Monsanto from Obtaining a Fair  
13 Trial. .... 9

14 D. Evidence Was Erroneously Admitted or Excluded..... 10

15 1. Expert Testimony Should Have Been Excluded Under *Sargon*. .... 10

16 2. Other Prominent Evidence Was Improperly Admitted or  
17 Excluded..... 12

18 E. There Were Prejudicial Instructional Errors. .... 16

19 II. THE VERDICTS ARE NOT SUPPORTED BY THE WEIGHT OF THE EVIDENCE. .17

20 A. The Weight of the Evidence Does Not Support that Roundup  
21 Exposure Was a Substantial Factor in Causing Each Plaintiff’s Non-  
22 Hodgkin Lymphoma. .... 18

23 1. Alva Pilliod’s DLBCL ..... 19

24 2. Alberta Pilliod’s PCNSL..... 20

25 B. The Evidence Does Not Support that Roundup’s Design Was  
26 Defective. .... 21

27 C. The Weight of the Evidence Does Not Support a Failure-to-Warn  
28 Because the Generally Accepted Science at the Time Roundup Was  
Manufactured, Sold, and Distributed Did Not Recognize a Risk of  
NHL..... 22

III. THE DAMAGES AWARDS ARE UNSUPPORTED, EXCESSIVE AND  
UNCONSTITUTIONAL. .... 24

A. The Award for Future Economic Damages to Mrs. Pilliod Lacked  
the Evidentiary Support Required Under Settled California Law..... 25

B. The Awards for Noneconomic Loss Are Excessive and  
Unsupported. .... 26

C. The Punitive Damages Awards Are Excessive, Duplicative, and  
Unconstitutional. .... 28

1 INTRODUCTION

2 This case compels close judicial scrutiny. The multi-*billion* dollar sum awarded in  
3 punitive damages is more than **36 times** greater than the largest punitive award ever upheld on  
4 appeal in California, dwarfs the already excessive compensatory awards, and is astronomically  
5 greater than awards California courts routinely vacate or reduce.

6 The jury imposed this astounding award in the absence of any evidence that Monsanto  
7 acted with malice, and despite the undisputed fact that Monsanto’s determination regarding the  
8 safety of Roundup conformed with the conclusions of independent regulators and scientists  
9 throughout the world. The verdicts do not reflect the evidence presented in the case; they reflect  
10 deep passion and prejudice borne from Plaintiffs’ counsel’s improper argument rested on  
11 inflammatory, fabricated, and irrelevant evidence that should have been excluded. This  
12 prejudicial presentation—including a determined focus on IBT and Proposition 65—  
13 overshadowed the actual scientific evidence and overwhelmed the true causation questions for the  
14 jury. The resulting trial focused not on ascertaining the truth regarding the state of the science,  
15 causation, and compliance with legal duties, but instead on vilifying Monsanto in the abstract.

16 Monsanto “is entitled to two decisions on the evidence, one by the jury and the other by  
17 the court on a motion for a new trial.” *People v. Robarge*, 41 Cal. 2d 628, 633 (1953). In ruling on  
18 a motion for new trial, the Court “must independently weigh the evidence and assess whether it  
19 sufficiently supports the jury’s verdict.” *People v. Capps*, 159 Cal. App. 3d 546, 552 (1984). The  
20 exceptional verdicts here require particularly close scrutiny. For at least three separate reasons,  
21 the verdicts should be vacated and a new trial granted:

22 ***First***, numerous irregularities in the trial prejudiced Monsanto and denied it a fair trial,  
23 including the joinder of Plaintiffs’ claims in a single trial, intense local pre-trial publicity, and  
24 repeated misconduct by Plaintiffs’ counsel. This prejudice was compounded by evidentiary errors,  
25 including the admission of evidence regarding IBT and Proposition 65. Plaintiffs made this  
26 irrelevant and prejudicial evidence the centerpiece of their case, resulting in a trial untethered to  
27 the critical scientific questions that should have been the focus. Additionally, instructional error  
28 on design defect and punitive damages requires a new trial.

1 (2012). To demonstrate that misconduct was prejudicial, the moving party need only demonstrate  
2 a probability that it would have achieved a “result more favorable,” absent the misconduct. *See*  
3 *Cassim v. Allstate Ins. Co.*, 33 Cal. 4th 780, 800 (2004); *Garcia*, 204 Cal. App. 4th at 149. That  
4 bar is not particularly high: California courts have “made clear that a ‘probability’ in this context  
5 does not mean more likely than not, but merely a reasonable chance, more than an abstract  
6 possibility.” *Id.* A single flagrant misstatement can sustain a new trial motion. *Id.* at 803.

7 Counsel here engaged in misconduct throughout trial, culminating in an over-the-top  
8 closing statement littered with precisely the type of misconduct that California law flatly  
9 prohibits—a performance that capped a trial in which counsel routinely ignored the Court’s  
10 rulings and sought to invoke fear in jurors. Any of this conduct on its own could be grounds for a  
11 new trial; combined, it compels one.

12 **1. Misconduct During Closing Statement Requires a New Trial.**

13 During his closing statement, Plaintiffs’ counsel made a series of calculated, intentional,  
14 and improper statements, several over sustained objections as well as the Court’s *sua sponte*  
15 admonitions. These statements were designed solely to inflame the prejudice and passion of the  
16 jury against Monsanto. There can be no doubt this misconduct was intentional. The day before  
17 closing statement, counsel said that he had “every intention of getting this jury angry at  
18 [Monsanto], getting them very angry at Monsanto.” Declaration of Eugene Brown (“Brown  
19 Decl.”) at Ex. A, Trial Transcript (“Tr.”) 5430:8-9. And that is precisely what counsel set out to  
20 do. His statements ignored the Court’s specific warning to not engage in improper closing  
21 argument. *See, e.g.*, Tr. 5428:21-5429:22. Counsel’s conduct was so outrageous that the Court  
22 had to take the extraordinary step of admonishing him *sua sponte*. Tr. 5709:23.

23 Perhaps the most egregious form of attorney misconduct during trial is misleading the jury  
24 by false statement of law or fact. *See* Cal. Prof. Rules of Conduct 5-200(B); *see also People v.*  
25 *Bell*, 49 Cal. 3d 502, 538 (1989). Similarly, “[t]here can be no doubt that to argue facts not  
26 justified by the record, and to suggest that the jury could speculate, [is] misconduct.” *Malkasian*  
27 *v. Irwin*, 61 Cal. 2d 738, 747 (1964) (affirming new trial where counsel hypothesized about an  
28 accident in a manner that was “contrary to physical facts” and where “[t]here was no testimony

1 that even remotely suggested” his hypothetical occurred). Counsel made several arguments that  
2 were downright false and/or not supported by any evidence. For example:

- 3 • He falsely claimed that the statements on the label are “[Monsanto’s] choice and their  
4 choice alone” and implied that EPA plays no role in the warnings. Tr. 5532:2-5. This  
5 is simply not true: Monsanto cannot change the Roundup label without EPA’s review,  
6 agreement, and approval. Tr. 3617:13-14.
- 7 • He invited wild speculation that Mr. Pilliod’s compromised immune system may have  
8 been caused by Roundup, despite no evidence to support such claim.<sup>1</sup>
- 9 • He argued that the dose of exposure was 8 to 12 milligrams under the POEM exposure  
10 model, although no expert gave that dose calculation. He earlier attempted to introduce  
11 that same dose calculation during cross-examination, and an objection was sustained.  
12 *See* Tr. 5710:22-5711:21; 4682-4683.
- 13 • He claimed, without any evidence, that Mrs. Pilliod may have to pay out of pocket for  
14 her medication in the future. *See* Tr. 5598:14-19.

15 Plaintiffs’ counsel also flagrantly and intentionally violated multiple stipulations and  
16 orders *in limine* in a blatant attempt to elicit fear. For example, counsel:

- 17 • Violated the Court’s Order on MIL 14 by arguing that glyphosate is “in the food. It’s  
18 all over the place.” Tr. 5557:21-22.<sup>2</sup>
- 19 • Violated the Court’s Order on MIL 23 by arguing that Roundup may have affected Mr.  
20 Pilliod’s gut bacteria and led to his compromised immune system. This violation was  
21 especially egregious because Plaintiffs *stipulated* to Monsanto’s MIL on this issue.
- 22 • Violated the Court’s Order on MIL 24 by referring to a “magic” tumor in rebuttal, *see*  
23 Tr. 5717:3-5718:4—a term the Court repeatedly made clear was not to be used.

24 Moreover, counsel’s use of incendiary language went far beyond the bounds of  
25 professionalism and encouraged the jury to decide the case based on passion and prejudice rather  
26 than the evidence presented. For example, he argued that the EPA and EFSA would have “blood  
27 on their hands,” Tr. 5569:15-23—implying that the jury, too, would have blood on its hands if it  
28 reached the same conclusion as EPA and EFSA. This suggestion was clearly improper. *See*  
*People v. Bandhauer*, 66 Cal. 2d 524, 529 (1967) (attorney “cannot overreach by stating his

---

24 <sup>1</sup>*See* Tr. 5590:1-23 (“No one ever asked was [Mr. Pilliod’s compromised immune system] caused by the  
25 Roundup? . . . studies suggest that glyphosate alters the gut microbiome . . . [and] could impact the immune  
26 system . . . So there’s a possibility that the Roundup was itself causing the alleged immunosuppression.”).

26 <sup>2</sup> This not only violated the *in limine* order and repeated admonitions to not insinuate that glyphosate is  
27 everywhere, but it was also improper because (1) there was no evidence to support it; (2) it was wholly  
28 irrelevant given that Plaintiffs claim injury from dermal exposure; and (3) it was a tactic to scare the jury.  
*See Regalado v. Callaghan*, 3 Cal. App. 5th 582, 599 (2016) (noting that reptile theory arguments are  
improper).

1 personal belief based on facts not in evidence.”); *see also, e.g., Karlsson v. Ford Motor Co.*, 140  
2 Cal. App. 4th 1202, 1227 (2006). Although the Court sustained Monsanto’s objection, Tr.  
3 5569:17-23, counsel nevertheless proceeded with similarly improper argument: “EPA has a bad  
4 track record . . . How many things have been cancer causers that it took a lawsuit to find the truth  
5 of?” Tr. 5572:20-5573:3. These arguments were prejudicial and require a new trial. *See Simmons*  
6 *v. S. Pac. Transp. Co.*, 62 Cal. App. 3d 341, 356 (1976) (“[A]n attempt to rectify repeated and  
7 resounding misconduct by admonition is . . . like trying to unring a bell.” (citation omitted)).

8 Finally, Plaintiffs’ counsel misstated the law—and worse, instructed the jury to disregard  
9 the law—when he argued that punitive damages have “nothing to do with the Pilliods” and asked  
10 the jury to punish Monsanto based on its conduct during the entire time that Roundup has been on  
11 the market through today (45 years)—conduct that indisputably does not relate to Plaintiffs’  
12 alleged harm. *See State Farm Mut. Auto. Ins. Co. v. Campbell*, 538 U.S. 408, 422-23 (2003)  
13 (punitive damages may only punish defendant “for the conduct that harmed the plaintiff, not for  
14 being an unsavory individual or business.”)

15 **2. The Prejudice to Monsanto From Plaintiffs’ Improper Closing**  
16 **Statement Was Compounded by Misconduct Throughout Trial.**

17 The multiple improper arguments during closing statement were enough to warrant a new  
18 trial. But the prejudice to Monsanto is all the more because of the pervasiveness of counsel  
19 misconduct throughout trial. Before the jury was even sworn, the Court admonished Plaintiffs for  
20 asking improper questions meant to precondition the jurors during *voir dire*. Tr. 867:23-24.  
21 Counsel’s misconduct then continued into opening statements, when he improperly referred to the  
22 case as a “historic fight.” Tr. 1309:16. *See, e.g., Loth v. Truck-A-Way Corp.*, 60 Cal. App. 4th  
23 757, 765 (1998) (arguments that ask “each juror to become a personal partisan advocate” are  
24 improper because they “tend[] to denigrate the jurors’ oath.”).

25 Plaintiffs’ counsel also made an elaborate show by twice putting on gloves to handle a  
26 Roundup bottle that contained only water. This dramatic demonstration served no purpose other  
27 than to try to scare the jury; in fact, the Court had to instruct the jury that there was no reason to be  
28 concerned because the bottle contained water. There can be no doubt that this show grabbed the

1 jurors' attention and, even after the Court's instruction, caused confusion. *See* Brown Decl. Ex. J,  
2 4/18/19 Juror Question No. 12 ("Why the Lawyer put on gloves if only Water in the Roundup  
3 container?").

4 Taken together with counsel's misconduct in closing argument, these pervasive and  
5 repeated episodes rise to the level of prejudice. *See* *Martinez v. Dept. of Transp.*, 238 Cal. App  
6 4th 559, 568 (2015) ("[T]he overwhelming cumulative effect of the misconduct . . . requires  
7 reversal."); *Garden Grove Sch. Dist. of Orange Cty. v. Hendler*, 63 Cal. 2d 141, 143 (1965)  
8 (Combination of attorney misconduct, which included "alluding to facts not in evidence" and  
9 "appeal[ing] to the jurors' economic self-interest and provinciality" amounted to prejudicial error).

10 **B. Joining Plaintiffs' Separate Claims in a Single Trial Was Prejudicial and**  
11 **Erroneous.**

12 A new trial on each Plaintiff's separate case is required because combining their claims in  
13 a single trial caused significant prejudice that would not have occurred in individual trials.

14 In other cases, this Court correctly ruled that plaintiffs' cases should be severed and tried  
15 separately.<sup>3</sup> Here, though, Plaintiffs' cases were presented to the jury as a single unit simply  
16 because they are married. The prejudice to Monsanto that resulted from a combined trial of  
17 Plaintiffs' cases cannot be overstated. Instead of delineating Plaintiffs' cases to ensure that they  
18 were afforded separate consideration, Plaintiffs' counsel capitalized on their joinder at every turn,  
19 using it throughout trial to bolster weaknesses in Plaintiffs' individual cases, and by making  
20 arguments and offering evidence that indisputably would not have been admissible if the cases had  
21 been tried separately. Below are just a few of the many and pervasive ways that joinder  
22 improperly prevented Monsanto from obtaining a fair trial on each Plaintiff's case:

23 • ***Bolstering of evidence through aggregation and repetition.*** Combining Plaintiffs' cases  
24 in a single trial inflated the strengths and obscured the weaknesses of their individual claims. By  
25 aggregating their evidence, Plaintiffs were able to bolster each other's cases merely by presenting  
26 them together. Although Plaintiffs co-owned properties where they used Roundup, the factual

27 \_\_\_\_\_  
28 <sup>3</sup> *See* Brown Decl. at Ex. K, 7/14/17 Order, *Billings v. Monsanto Co.*, Case No. RG17852375 (Ex. 1 to  
Monsanto's 11/20/18 RJN); Brown Decl. at Ex. L, 7/26/17 Order, *Woodbury v. Monsanto Co.*, Case No.  
RG17855094 (Ex. 2 to 11/20/18 RJN).

1 similarities between their cases end there. They were exposed to significantly different amounts  
2 of Roundup, with Mr. Pilliod spraying at least three times as much as Mrs. Pilliod. Tr. 2765:22-  
3 2766:2. They had different types of Non-Hodgkin Lymphoma (“NHL”), different risk factors,  
4 different treatments and prognoses, and were diagnosed years apart. As one California federal  
5 court noted in severing the claims of two plaintiffs who both alleged that Roundup caused their  
6 cancers:

7 Consolidating the two claims may give rise to the easy, potentially  
8 prejudicial inference that if Roundup caused Rubio’s cancer it  
9 caused Mendoza’s as well, or vice versa. **In other words, by trying  
10 the two claims together, one plaintiff, despite a weaker case of  
11 causation, could benefit merely through association with the  
12 stronger plaintiff’s case.**

11 *Rubio v. Monsanto*, 181 F. Supp. 3d 746, 758 (C.D. Cal. 2016)(emphasis added). That is precisely  
12 what occurred here. Similarly, the introduction of cumulative expert testimony that arose from  
13 joinder also prejudiced Monsanto. Plaintiffs presented two specific causation experts who both  
14 offered opinions about both Plaintiffs. Thus, not only did the jury hear causation evidence for  
15 each Plaintiff’s case that bolstered the other’s, but they heard that evidence multiple times.

16 • **Argument regarding the “odds” that spouses would both get NHL.** The fact that Plaintiffs  
17 are husband and wife heightened the prejudice of combining their cases in a single trial. Although  
18 Plaintiffs’ cases involved numerous differences as detailed above, it would be difficult for any jury  
19 to refrain from jumping to the assumption that Roundup caused both their cancers simply because  
20 of the coincidental fact that two elderly spouses who had used Roundup both contracted NHL  
21 subtypes. Indeed, from opening statement to closing statement and at numerous points in  
22 between, Plaintiffs’ counsel openly *encouraged* the jury to jump to that same baseless assumption.  
23 *See, e.g.*, Tr. 1314:10-1315:7 (Opening statement: “if you do the probability of both of them  
24 getting it just by chance, just by random chance alone, not because of Roundup, because of  
25 something else, it’s 1 in 20,000”; “this is so unlikely, it must be an environmental exposure, a  
26 chemical, Roundup”); Tr. 3883 (Dr. Nabhan analogizing Roundup exposure to a contagious  
27 disease like the flu that spreads among households and testifying that “it’s just common sense”  
28 that Roundup was the cause since both spouses had NHL); Tr. 3888 (Plaintiffs’ counsel asking Dr.

1 Nabhan to estimate “the odds of the two of them both coming down with [NHL].”); Tr. 5580:11-  
2 21 (Closing argument: it is “unheard of,” or at least “very rare,” “for two genetically unrelated  
3 people to get the same” type of cancer).

4 • *Admission of evidence related to failure-to-warn and punitive damages that would have*  
5 *otherwise been inadmissible.* The factual questions of (1) whether Monsanto failed to adequately  
6 warn consumers, and (2) whether Monsanto’s conduct rose to the extreme level of malice required  
7 for punitive damages, are closely tied to the time period at issue in a given individual case. *See*  
8 CACI 1205 (Jury Instruction No. 21) (to prevail on a strict liability failure-to-warn claim, plaintiff  
9 must prove that the product’s risks were “known or knowable in light of the scientific knowledge  
10 that was generally accepted in the scientific community **at the time of manufacture, distribution**  
11 **and sale**”) (emphasis added); CACI 3945 (Jury Instruction No. 32) (punitive damages must be  
12 based on conduct that caused plaintiff’s harm). As explained in section II.C., *infra*, the relevant  
13 time periods for Mr. Pilliod and Mrs. Pilliod are different in critical ways. By combining their  
14 cases in a single trial, however, Plaintiffs were able to introduce evidence that otherwise would not  
15 have been admissible in a single-plaintiff trial. For example, Mrs. Pilliod stopped using Roundup  
16 in early 2015. *See* Tr. 3740:6-14. Thus, no conduct by Monsanto after early 2015 could have  
17 caused her NHL. Yet, Plaintiffs introduced significant evidence regarding the state of the science  
18 and Monsanto’s conduct after that time period, including evidence of Monsanto’s alleged efforts  
19 to “ghostwrite” the 2016 Intertek papers. *See* Brown Decl. Ex. B, Reeves Dep. at 458:15-19,  
20 460:3-466:13.

21 • *Same jury deciding punitive damages twice.* Joining Plaintiffs’ claims also left the same  
22 jury to decide the issue and amount of punitive damages twice based on the evidence presented in  
23 a single trial, resulting in double punishment to Monsanto for the exact same sales of the same  
24 products, as described further in section I.E., *infra*.

25 \* \* \*

26 The prejudice that resulted from a joint trial could not be cured—and was not cured—  
27 through jury instructions. Although the jury was told to consider each Plaintiff’s claims separately  
28 and to consider only the evidence applicable to each Plaintiff’s claims, that proved an impossible

1 and unmanageable admonition to follow. The numerous differences between each Plaintiff's  
2 particular medical histories, risk factors, conditions, and treatments presented an overwhelming  
3 task for jurors to understand the large volume of medical and other evidence without becoming  
4 confused about which evidence related to which Plaintiff. It is not realistic to ask a jury to un-  
5 hear or ignore evidence for one Plaintiff or to parse through and compartmentalize complex causation  
6 evidence, particularly when Plaintiffs' counsel made every effort to conflate their cases and  
7 present them as a single indivisible unit. *See, e.g., People v. Hamilton*, 55 Cal. 2d 881, 896, 900  
8 (1961) (limiting instruction requiring "mental maneuvers" was insufficient where neither lay or  
9 trained minds could have obeyed it), *overruled in part on unrelated grounds by People v. Wilson*,  
10 1 Cal. 3d 431 (1969). The jury's identical punitive damage awards for each Plaintiff demonstrate  
11 that they were not afforded separate consideration.

12 **C. Local Pretrial Publicity Prevented Monsanto from Obtaining a Fair Trial.**

13 A new trial is required because extensive local pretrial publicity prevented Monsanto from  
14 having the case heard by a fair and impartial jury, as it was legally entitled. *See, e.g., Paesano v.*  
15 *Super. Ct.*, 204 Cal. App. 3d 17, 20 (1988); *Williams v. Super. Ct.*, 34 Cal. 3d 584, 587-95 (1983).  
16 Since the first Roundup verdict came out of San Francisco Superior Court last August (*Johnson*),  
17 the Bay Area has been inundated with local media reporting about the Roundup cases, on top of  
18 numerous anti-Roundup advertisements that Plaintiffs' counsel has specifically targeted at the Bay  
19 Area. *See* Brown Decl. Ex. O, Monsanto's Opp. to Pls.' Request for TRO. Then, during *voir dire*  
20 in this case, a jury in San Francisco rendered a verdict against Monsanto in another case  
21 (*Hardeman*). That verdict was heavily covered in local media at the very time the court in this  
22 case was attempting to secure an impartial jury. The timing of the *Hardeman* verdict tainted the  
23 jury pool and foreclosed Monsanto's ability to receive a fair trial. *See* Tr. 1306:24-1307:16.

24 The threat of a biased jury from prejudicial media exposure was not simply theoretical.  
25 Based on the first set of juror questionnaires received (before the *Hardeman* verdict), more than  
26 half of the potential jurors knew about the *Johnson* verdict, and nearly half also said they could  
27 not be fair and impartial. Indeed, one juror who was selected for the jury over Monsanto's  
28 objection openly admitted that he was already biased against Monsanto. Tr. 1025:6-10 (juror

1 Olsen stating that he knows Monsanto has been a “bad actor” in the past and that he has a “pretty  
2 negative impression of Monsanto.”); Tr. 1048:22 (Monsanto moving to strike Olsen for cause).  
3 While the Court’s denial of Monsanto’s motion to strike this biased juror for cause represents an  
4 independent error warranting a new trial, *see, e.g., People v. Szymanski*, 109 Cal. App. 4th 1126,  
5 1133 (2003), the juror’s comments also illustrate the biased nature of the jury and the jury pool as  
6 a whole. Before the jurors heard a single piece of evidence in this case, they were bombarded with  
7 media and ads reporting that Roundup causes cancer and portraying Monsanto in a negative light.

8 **D. Evidence Was Erroneously Admitted or Excluded.**

9 Prejudicial evidentiary errors require a new trial. Code Civ. Proc. § 657(1), (7);  
10 *Hernandez v. Cty. of Los Angeles*, 226 Cal. App. 4th 1599, 1616 (2014). That is especially so  
11 here, where Plaintiffs capitalized on the admission of highly prejudicial evidence, including  
12 improper expert testimony and testimony regarding IBT and Proposition 65.

13 **1. Expert Testimony Should Have Been Excluded Under *Sargon*.**

14 On a motion for new trial, this Court can reconsider evidentiary rulings under *Sargon*. *See*  
15 Code Civ. Proc. § 657(1); *Sandco Am., Inc. v. Notrica*, 216 Cal. App. 3d 1495 (1990). Having  
16 now had the benefit of seeing the testimony at trial, this Court should grant a new trial based on  
17 numerous instances of improper testimony offered by Plaintiffs’ experts, as Monsanto argued in  
18 its *Sargon* briefing, incorporated by reference herein.

19 **Dr. Benbrook.** This Court excluded the majority of Dr. Benbrook’s proffered opinions,  
20 specifying the limited testimony that Dr. Benbrook would be permitted to offer. *See* Brown Decl.  
21 Ex. P, 3/18/19 Order at 5–7; *see also* Tr. 3479:25-3480:12. Anticipating, based on past  
22 experience, that Plaintiffs would try to expand Dr. Benbrook’s testimony beyond the parameters of  
23 the *Sargon* ruling, Monsanto filed a bench brief highlighting specific testimony that Dr. Benbrook  
24 should be reminded to not offer. *See* Brown Decl. Ex. Q, 4/16/19 Bench Brief Regarding  
25 Testimony Dr. Benbrook May Not Offer. Prior to Dr. Benbrook’s direct examination, the Court  
26 expressed frustration when Plaintiffs explained the extensive breadth in which they were planning  
27 to question Dr. Benbrook. The Court stated that it felt like it had been “blindsided,” believing that  
28 Dr. Benbrook was only “going to touch on a fairly narrow subject.” Tr. 3487:8-3489:1; 3493:1-5.

1 Instead of offering testimony “on a fairly narrow subject,” Dr. Benbrook improperly served as the  
2 mouthpiece of Plaintiffs’ attorneys, narrating Monsanto company documents to ascribe  
3 unsupported negative motives, intentions, and conduct to Monsanto. Monsanto objected  
4 throughout Dr. Benbrook’s testimony. *See, e.g.*, Tr. 3529:4-8; 3530:13, 23-25; 3546:11-14;  
5 3549:2-3; 3567:2-3, 21-22; 3587:17; 3591:20; 3592:20; 3635:14; 3636:9-10. Some objections  
6 were sustained; others were overruled. But the damage of Dr. Benbrook’s irrelevant and  
7 prejudicial testimony was done. Dr. Benbrook’s testimony should have been excluded in its  
8 entirety.

9 **Dr. Sawyer.** Dr. Sawyer—who is not a medical doctor or epidemiologist—should not  
10 have been permitted to offer testimony on causation. Tr. 3288:19-3289:18; *See also Sargon*  
11 *Motion to Exclude Sawyer.* Dr. Sawyer provided absolutely no reliable methodology or basis for  
12 his opinions on general causation. With respect to specific causation, he openly admitted that he  
13 did not consider either Plaintiff’s medical history or any other possible alternative causes for their  
14 NHLs, instead electing to “defer that to other experts in this case.” Tr. 3259:5-3260:3.  
15 Nevertheless, Dr. Sawyer was permitted to offer his baseless conclusions that Roundup is  
16 “something that can cause non-Hodgkin’s lymphoma” and that it was a “substantial factor” in  
17 causing the Plaintiffs’ cancers specifically. Tr. 3123:9-19. Dr. Sawyer also offered the  
18 unsupported and speculative opinion that Roundup is a cancer promoter, citing the George study,  
19 which has been rejected by regulators around the world including IARC. Tr. 2035:8-2038:5;  
20 3242:13-3245:9; 3285:17-21. He also testified about irrelevant and inflammatory topics such as  
21 Sarin gas, European bans of the surfactant POEA, and trace contaminants. *See* Tr. 3125:18-25; Tr.  
22 3162:16-17; Tr. 3128:2-3133:11. *See also* Section I.D.2, *infra*. Because Dr. Sawyer had no  
23 relevant expertise or case-specific knowledge to offer these opinions, and because the opinions  
24 were not based on any reliable methodology other than his own say-so and, in some instances,  
25 were designed solely to confuse and distract the jury, they should have been excluded.

26 **Dr. Nabhan and Dr. Weisenburger.** Dr. Nabhan’s and Dr. Weisenburger’s so-called  
27 “differential etiology” testimony should have been excluded. Through these “differential  
28 etiologies,” Dr. Nabhan and Dr. Weisenburger professed to “rule in” all possible causes of

1 Plaintiffs’ NHLs and then “rule out” all of those causes except Roundup. But neither expert  
2 employed a reliable methodology in doing so. Both experts ignored (and thus failed to reliably  
3 “rule in”) a range of Plaintiffs’ conditions and characteristics with statistically significant links to  
4 NHL. The experts then summarily ruled out Plaintiffs’ other risk factors (besides Roundup)  
5 without providing any reasoned explanation. Moreover, Dr. Nabhan and Dr. Weisenburger  
6 provided no basis for ruling out an idiopathic explanation despite agreeing that the vast majority of  
7 NHL cases have no known cause, Tr. 2791:9-20; 4160:19-22, and admitting that Plaintiffs could  
8 have developed the exact same NHLs at the same time even if they had never been exposed to  
9 Roundup. Tr. 2788:4-11; 4168:11-23. *See also* Section II.A., *infra*. Dr. Nabhan’s and Dr.  
10 Weisenburger’s results-oriented, courtroom-driven, pseudo-scientific testimony lacked the  
11 “intellectual rigor” and coherence required for admission at trial and should have been excluded.  
12 *See Sargon Enters., Inc. v. Univ. of S. Cal.*, 55 Cal. 4th 747, 772 (2012); *Tamraz v. Lincoln Elec.*  
13 *Co.*, 620 F.3d 665, 674-75 (6th Cir. 2010) (reversing admission of “differential diagnosis”  
14 testimony where idiopathic causation “currently accounts for the vast majority of Parkinson’s  
15 Disease cases, making it impossible to ignore and difficult to rule out.”); *Bland v. Verizon*  
16 *Wireless, (VAW) LLC*, 538 F.3d 893, 897-98 (8th Cir. 2008) (finding that “[w]here the cause of the  
17 condition is unknown in the majority of cases, an expert cannot properly conclude, based upon a  
18 differential diagnosis,” the plaintiff’s “exposure to Freon was ‘the most probable cause’ of [his]  
19 exercise-induced asthma.”). *See also* Monsanto’s *Sargon* Motion.

20 **2. Other Prominent Evidence Was Improperly Admitted or Excluded.**

21 **Proposition 65.** The Court initially granted Monsanto’s motion to exclude evidence  
22 related to Proposition 65. The Court specifically found that “[t]he standards for addition to the  
23 Prop 65 list are significantly different from the standards for causation in this case,” Ex. S, 3/19/19  
24 Order at 4; that admission of evidence related to Prop 65 would create a “black hole”; that “the  
25 potential for misleading the jury . . . would be a major concern,” Tr. 170:24-171:21; and that  
26 unlike the deliberative, science-driven decisions about glyphosate made by EPA and the foreign  
27 regulators, California’s decision to include glyphosate on Prop 65 was automatic and ministerial in  
28 nature. Tr. 1223:6-20. But after pressure from Plaintiffs’ counsel and over Monsanto’s objections,

1 the Court eventually changed its mind and permitted Plaintiffs to offer evidence on Prop 65.<sup>4</sup>

2 Plaintiffs then made Prop 65 and California’s ministerial and misleading conclusion that  
3 glyphosate is “known to the State of California to cause cancer” a centerpiece of their case,  
4 offering an expert witness who had previously been excluded (Dr. Pease) to discuss Prop 65 in  
5 detail, and highlighting Prop 65 during opening statement, closing statement, and during their  
6 questioning of nearly every expert who testified in this case.<sup>5</sup> As the Court initially determined,  
7 however, the ministerial Prop 65 process is not akin to the substantive and deliberative decision-  
8 making process undertaken by EPA and the foreign regulators. Nor was Monsanto allowed to  
9 introduce evidence that any warning requirements had been stayed by a federal district court  
10 because providing a warning would be false and misleading to consumers. *See Nat’l Ass’n of*  
11 *Wheat Growers v. Zeise*, 309 F. Supp. 3d 842, 853 (E.D. Cal. 2018). The jury was therefore left  
12 with the impression that a warning is required, and Monsanto has simply not provided one. In  
13 effect, Plaintiffs used Prop 65 to circumvent any need to prove causation or duty to warn,  
14 presenting the case as if California had already determined those issues. Plaintiffs’ repeated  
15 references to this evidence severely prejudiced Monsanto and misled the jury, which was clearly  
16 influenced by this evidence and asked a specific question about it during closing argument. *See*  
17 *Ex. T, Jury Question No. 18 (5/8/19)*.

18 **IBT.** The Court granted in part Monsanto’s motion to exclude evidence regarding  
19 Industrial Bio-Test, ordering that Plaintiffs could discuss the history of the scientific fraud that  
20 occurred at IBT but could *not* suggest or imply that Monsanto was in any way involved. 3/19/19  
21 Order at 6; Tr. 471:22-472:1. As Plaintiffs proved throughout trial, the line between permissible  
22 and impermissible references to IBT was either impossible to draw or one that Plaintiffs  
23 intentionally blurred. Each time Plaintiffs offered evidence or argument about IBT, they did so by

24 \_\_\_\_\_  
25 <sup>4</sup> In so doing, the Court offered Monsanto an ultimatum: it could “choose” to keep Prop 65 out of the case *if*  
26 it also agreed to withdraw its request for judicial notice of certain foreign regulatory documents. Tr.  
27 1282:13-1284:4. Monsanto did not accept this ultimatum, which would have required it to withdraw its  
28 proper request for judicial notice and thus agree to the exclusion of admissible evidence. In so doing,  
Monsanto expressly reserved its objection to the Court’s admission of evidence related to Prop 65 under  
any circumstance. Tr. 1284:23-1285:6.

<sup>5</sup> *See, e.g.*, Tr. 1312:8-12; 1860:12-16; 2102:19-2103:15; 2462:15-17; 2992:9-12; 3423:7-3425:25; 4967:6-  
18; 5219:15-5220:24; 5546:4-6.

1 discussing Dr. Wright (a former Monsanto employee) and his alleged role in the IBT fraud. *See*,  
2 *e.g.*, Tr. 1344:12-1346:21; 3531:21-3532:8; 3634:9-3635:22; 5500:21-5501:21. In so doing,  
3 Plaintiffs repeatedly offered testimony and argument insinuating that Monsanto (through Dr.  
4 Wright) actively defrauded the EPA. The most egregious example of this misleading and  
5 incendiary questioning occurred during Dr. Benbrook’s redirect examination, when Plaintiffs  
6 repeatedly asked (over sustained objections) about Monsanto’s alleged involvement in the IBT  
7 scandal. Tr. 3634:9-3635:22. During closing, Plaintiffs led with this improper theme, arguing that  
8 Roundup was “**literally born in fraud**” before again describing Dr. Wright’s (and, by false  
9 implication, Monsanto’s) alleged role in the IBT fraud. Tr. 5500:21-5501:21 (emphasis added).

10 Plaintiffs’ references to this evidence were improper and prejudicial for multiple reasons.  
11 First, the evidence was irrelevant and served only to distract and confuse the jury and to prejudice  
12 Monsanto. Monsanto, like the numerous other registrants whose data was invalidated when the  
13 fraud at IBT was discovered, had nothing to do with the fraud. Moreover, all of the invalidated  
14 studies have been repeated by Monsanto in accordance with EPA guidelines and play no role in  
15 the current registration of Roundup. Nevertheless, as Monsanto predicted pretrial, Plaintiffs used  
16 this evidence to paint a prejudicial and false picture, inviting the jury to infer that Monsanto was  
17 actively involved in the fraud. Second, courts have repeatedly determined that claims of “fraud-  
18 on-the-EPA” under state law are impliedly preempted by FIFRA. *See, e.g., Nathan Kimmel, Inc.*  
19 *v. DowElanco*, 275 F.3d 1199 (9th Cir. 2002); *Giglio v. Monsanto Co.*, 2016 WL 1722859, at \*3  
20 (S.D. Cal. April 29, 2016). This evidence should have been excluded.

21 **EPA’s 2019 Proposed Interim Registration Decision.** On April 30, 2019, the EPA  
22 released a new report that “reflects the conclusions of EPA’s most recent risk assessments”  
23 regarding glyphosate. *See* Brown Decl. Ex. U at 6. The report detailed that “[t]he EPA  
24 thoroughly assessed risks to humans from exposure to glyphosate from all uses and all routes of  
25 exposure and *did not identify any risks of concern.*” *Id.* at 19 (emphasis added). Monsanto  
26 requested judicial notice of this document the day after its release, but the Court denied this  
27 request. Tr. 5068:24-5070:18. The April 2019 EPA report was directly probative of the “best  
28 scholarship” on glyphosate available and to show that Monsanto did not act with malice or

1 oppression in marketing and selling Roundup. Judicial notice and admission of the report was  
2 also necessary to rebut Plaintiffs' repeated charges that EPA might change its mind on glyphosate  
3 at any time or even as a result of this trial. *See, e.g.*, Tr. 1404:6-16; 3571:22-3572:1. Thus, the  
4 jury was left with the inaccurate impression that the EPA had not made any recent  
5 pronouncements about glyphosate and could be on the cusp of finding that it is carcinogenic.  
6 Preventing Monsanto from presenting the most recent EPA evidence to the jury and from  
7 rebutting Plaintiffs' false and misleading claims about EPA's assessment of glyphosate was both  
8 erroneous and prejudicial.<sup>6</sup>

9 **Trace Contaminants and Impurities.** In an effort to confuse the jury and to prejudice  
10 Monsanto, Plaintiffs discussed throughout trial several contaminants and impurities that appear in  
11 Roundup in trace amounts. During opening, Plaintiffs referenced formaldehyde, arsenic, and  
12 ethylene oxide, stating that these "contaminants" appear in Roundup and are known to cause  
13 cancer. Tr. 1329:24-1330:5. Dr. Sawyer described formaldehyde as an "unwanted contaminant"  
14 and a "confirmed human carcinogen" that appears in Roundup at "extraordinarily high" levels. Tr.  
15 3128:25-3130:6. Dr. Sawyer further testified that ethylene oxide—which he described as an  
16 "extremely powerful sterilizing gas" that "kills every type of biological life on earth"—can be  
17 trapped in the head space of Roundup bottles. Tr. 3131:4-3132:16. However, Plaintiffs offered  
18 absolutely no evidence about the amount of Plaintiffs' exposure, if any, to these alleged trace  
19 impurities or contaminants, that any of them caused Plaintiffs' NHLs, or that any impurity or  
20 contaminant in Roundup exceeded the EPA-defined safe level. This testimony had no probative  
21 value and served only to prejudice Monsanto and to provoke fear in the jury.<sup>7</sup>

22 **POEA.** Plaintiffs also offered misleading and irrelevant evidence and testimony about  
23 POEA, a surfactant used in Roundup. Dr. Sawyer testified that POEA is approximately 40 times  
24 more genotoxic than glyphosate and is "banned basically everywhere except the US." Tr.

25 \_\_\_\_\_  
26 <sup>6</sup> Monsanto notes that the Court *permitted* Plaintiffs to introduce and question witnesses about a study that  
27 was released during trial, *e.g.*, Tr. 2302:7-2308:11, while at the same time precluding Monsanto from  
introducing the EPA determination that was released during trial.

28 <sup>7</sup> Dr. Sawyer also compared glyphosate to Sarin gas, which he described as a "war gas" that "can penetrate  
right through clothing" and is "lethal within a matter of a minute." Tr. 3125:18-25.

1 3160:17-19; 3162:16-17. And Dr. Weisenburger testified that glyphosate with a surfactant is  
2 approximately 200 times more genotoxic than glyphosate alone. Tr. 2764:2-10. But Plaintiffs  
3 offered no evidence comparing the genotoxicity of Roundup's POEA formulation to other  
4 glyphosate-based formulations, nor did they offer any evidence explaining how the increase in  
5 genotoxicity contributed to Plaintiffs' NHLs. As Plaintiffs' experts admitted, genotoxicity is not  
6 the same thing as carcinogenicity. Tr. 1982:23-1983:4; 5129:10-24. This evidence was irrelevant,  
7 served no proper purpose, and was designed solely to prejudice the jury against Monsanto.

8 **"List Price" of Revlimid.** Plaintiffs presented evidence that Mrs. Pilliod currently takes  
9 the prescription medicine Revlimid and will continue to need that medication for the rest of her  
10 life. The Court erroneously permitted Plaintiffs to present the full "list price" for that medication,  
11 although there was no evidence that Mrs. Pilliod was reasonably certain to incur that amount. The  
12 error was compounded by the Court's refusal to permit cross-examination that the source of  
13 information for the "list price" expressly noted that it was not applicable to those, like Mrs.  
14 Pilliod, who have insurance. Tr. 4184:11-4189:11. This evidentiary error resulted in a nearly \$3  
15 million award for future economic damages that was not based on admissible evidence and was  
16 inconsistent with governing California law. *See* Section III.A., *infra*.

17 **E. There Were Prejudicial Instructional Errors.**

18 A new trial is required when the instructions given to the jury contain errors of law. Code  
19 Civ. Proc. § 657(7). The following instructional errors warrant a new trial here:

20 **Consumer Expectation Instruction:** The consumer expectation test was improper for this  
21 case, and therefore the consumer expectation instruction (CACI 1203) should not have been given.  
22 *See* JNOV Motion. Even if the test were applicable, the instruction given was erroneous because  
23 it failed to advise the jury that it must *first* determine whether the product is one about which an  
24 ordinary consumer can form reasonable minimum safety expectations. *See* CACI 1203, Directions  
25 for Use. This predicate finding is required if there is a factual question about whether the product  
26 is one about which an ordinary consumer can form reasonable minimum safety expectations.  
27 Here, the court did not make a finding that Roundup was such a product and did not submit that  
28 question to the jury. Thus, the instruction erroneously assumed a finding that was not made.

1           **Punitive Damages Instructional Error:** The punitive damages instructions were  
2 erroneous in at least two respects. *First*, it was error to instruct the jury to determine and award  
3 punitive damages twice for the same conduct in a single case. Tr. 5437:11-15. There was no  
4 evidence Mr. Pilliod’s and Mrs. Pilliod’s purchase and use of Roundup were made separately  
5 based on separate conduct by Monsanto. In choosing to join their claims in a single trial, Plaintiffs  
6 chose to present one set of evidence regarding Monsanto’s conduct and did not offer any  
7 distinction between how Monsanto’s conduct impacted their respective decisions to use Roundup.  
8 Yet, the jury was asked to award punitive damages twice for that same conduct. There can be no  
9 doubt this error prejudiced Monsanto and led to jury confusion, as it resulted in the *doubling* of the  
10 already-excessive \$1 billion punitive damages award requested in Plaintiffs’ closing statement.  
11 *See* Tr. 5606:7-16. *Second*, the punitive damages instruction (No. 32) included “fraud,”  
12 “trickery,” and “deceit,” despite no valid evidentiary support for such conduct. Plaintiffs  
13 impermissibly used the “fraud” language to claim that Monsanto engaged in fraud on the EPA—a  
14 claim that is preempted—and to misleadingly link Monsanto to scientific fraud committed by IBT.  
15 *See, e.g.*, Tr. 5500:14-5501:3 (“The first one is the IBT scientific fraud...Roundup, its birth, its  
16 origin in our country, was fraud... it is a product that was literally born in fraud”).

17 **II. THE VERDICTS ARE NOT SUPPORTED BY THE WEIGHT OF THE**  
18 **EVIDENCE.**

19           In ruling on a motion for new trial, the trial judge “sits as an independent trier of fact” who  
20 may “disbelieve witnesses, reweigh the evidence, and draw reasonable inferences therefrom  
21 contrary to those of” the jury. *Barrese v. Murray*, 198 Cal. App. 4th 494, 496 (2011) (citation  
22 omitted). A trial judge “is not bound by conflicts in the evidence.” *Robarge*, 41 Cal. 2d. at 633.  
23 After finding its own facts and re-weighing the evidence, the court “may grant a new trial even  
24 though there [is] sufficient evidence to sustain the jury’s verdict on appeal, so long as the court  
25 determines the weight of the evidence is against the verdict.” *Candido v. Huitt*, 151 Cal. App. 3d  
26 918, 923 (1984). Such a re-weighing of the evidence is particularly important here in light of the  
27 numerous instances of misconduct that infected the jury.

28

1           A.     **The Weight of the Evidence Does Not Support that Roundup Exposure Was a**  
2                   **Substantial Factor in Causing Each Plaintiff’s Non-Hodgkin Lymphoma.**

3           To prevail on any of their claims, Plaintiffs each were required to show to a reasonable  
4           medical probability that Monsanto’s Roundup caused their NHL. *Jones v. Ortho. Pharm. Corp.*,  
5           163 Cal. App. 3d 396, 403 (1985). To do this, they had to present sufficient evidence not only that  
6           Roundup is capable of causing NHL generally, but *also* that Roundup was a substantial factor in  
7           causing their NHLs specifically. *Cooper v. Takeda Pharms. Am., Inc.*, 239 Cal. App. 4th 555,  
8           562-66 (2015). Plaintiffs were required to show that “but for” their exposure to Monsanto’s  
9           Roundup, they would not have developed their diseases. *See* CACI 430 (“Conduct is not a  
10           substantial factor in causing harm if the same harm would have occurred without that conduct.”).

11           Here, Plaintiffs failed to reliably exclude idiopathic causes of their NHLs and cannot  
12           demonstrate that they would not have developed NHL in the absence of their exposure to  
13           Roundup. As Plaintiffs’ experts agreed at trial, idiopathic causes account for the vast majority of  
14           NHL cases. Tr. 2791:15-20; 4160:19-22. Yet, Plaintiffs offered no evidence or explanation to  
15           establish that their cases fall outside this large majority even though they admitted that there is no  
16           pathology test or marker to identify NHL caused by Roundup as opposed to idiopathic causes. Tr.  
17           2816:7-2820:3. Instead, and as discussed in more detail below, Plaintiffs’ experts purported to  
18           “rule in” possible causes of Plaintiffs’ NHL and then “rule out” all of those causes except  
19           Roundup through so-called “differential etiology” testimony. But differential etiologies are only  
20           valid if “a substantial proportion of competing causes are known.” *Brown Decl. Ex. V*, Federal  
21           Jud. Ctr., Ref. Manual on Scientific Evidence (3d ed. 2011) pp. 617-618, footnote omitted. “Thus,  
22           for diseases [like NHL] for which the causes are largely unknown, . . . a differential etiology is of  
23           little benefit.” *Id.* Accordingly, Plaintiffs’ experts’ differential etiology testimony on NHL is  
24           fundamentally unreliable, and as a result, the jury’s verdict that Roundup caused Plaintiffs’ NHLs  
25           is against the weight of the evidence. *See, e.g., Hall v. Conoco Inc.*, 886 F.3d 1308, 1314 (10th  
26           Cir. 2018) (finding that “because the evidence had pointed to idiopathic causes in most cases of  
27           acute myeloid leukemia,” “the district court could reasonably view the failure to rule out  
28           idiopathic causes as fatal error tainting the differential diagnosis.”); *See also* Section I.D.1., *supra*.

          Additionally, for both Plaintiffs, the evidence demonstrated that other factors have

1 associations with NHL that are similar or greater than those Plaintiffs alleged for Roundup, yet  
2 Plaintiffs' experts did not reliably rule out these either. An independent evaluation of the  
3 evidence, as this Court must undertake, leads to the unmistakable conclusion that the verdicts on  
4 causation are not supported by the weight of the evidence.

5 **1. Alva Pilliod's DLBCL**

6 The weight of the evidence does not support a finding that exposure to Roundup was a  
7 substantial factor in causing Alva Pilliod's Diffuse Large B-Cell Lymphoma ("DLBCL").  
8 Although Plaintiffs had the burden to demonstrate that Mr. Pilliod would not have developed  
9 DLBCL if he had not been exposed to Roundup, *see, e.g.*, CACI 430 (Jury Instr. No. 19), his two  
10 specific causation experts, Dr. Weisenburger and Dr. Nabhan, both specifically admitted that he  
11 could have developed the exact same DLBCL at the same time even if he had never been exposed  
12 to Roundup. Tr. 2788:4-11; 4168:11-23. These admissions cannot be reconciled with the verdict.

13 And even if the most recent meta-analysis relied upon by Plaintiffs were reliable (it is not),  
14 it only showed a relative risk ratio of 1.4 for Roundup exposure and NHL. Tr. 2310:21-  
15 2311:1. Mr. Pilliod, however, had multiple other risk factors that carry greater NHL associations:

- 16
- 17 • History of Skin Cancer. Mr. Pilliod has developed skin cancer 22 different times,  
18 starting at the age of 28. Tr. 2871:12-18; 5140:2-3; 5142:16-5145:22. Dr. Levine  
19 testified that in nearly 50 years of practicing medicine, she has never seen a patient  
20 with a history of this many different occurrences of skin cancer or with an immune  
21 system this compromised. Tr. 5144:22-5145:5; 5168:22-5169:24. The epidemiology  
22 literature is replete with data that "confirm an increased risk of NHL in patients with  
23 recurrent skin cancer," showing risk ratios **between 2.0 and 3.0**. Tr. 2877:5-2879:3.
  - 24 • Ulcerative Colitis: Mr. Pilliod also has ulcerative colitis, an incurable autoimmune  
25 disease that poses an overall, statistically-significant increased risk of **1.5** of developing  
26 NHL. Tr. 2857:13-15; 2864:10-13; 5163:5-5164:15.
  - 27 • HPV: Mr. Pilliod also has human papilloma virus (HPV) and has experienced recurrent  
28 episodes of genital warts for many years. HPV and recurrent genital warts have been  
linked to statistically significant risk ratios for NHL of **3.0 to 3.1** in men. Tr. 2884:5-8,  
2885:13-16; 2887:22-2888:3; 5164:16-5166:7.

26 Moreover, both parties' experts agreed that a weakened immune system is a major risk  
27 factor for NHL. *See* Tr. 2869:3-16; 4147:11-18; 5169:1-24. The evidence is clear that Mr. Pilliod  
28 has a weakened immune system, as evidenced by, among other things, his 22 bouts with skin

1 cancer and the fact that the common herpes simplex virus (HSV) caused Mr. Pilliod to experience  
2 five different episodes of an incredibly rare and life-threatening infection of the lining and tissue  
3 of the brain known as meningoencephalitis. Tr. 5154:5-5162:17. Mr. Pilliod also had numerous  
4 other risk factors that substantially increased his risk for developing NHL, including advanced  
5 age, body weight, a long history of smoking, and family history of cancer. Tr. 2829:8-2831:4.

6 Plaintiffs' experts failed to reliably rule out these more likely causes of Mr. Pilliod's NHL,  
7 and in some cases, did not even try. In fact, Dr. Weisenburger "didn't even know" Mr. Pilliod was  
8 diagnosed in 2006 with "inflammatory bowel most consistent with ulcerative colitis" until he was  
9 shown the pathology report during cross-examination. Tr. 2859:16-22; 2861:16-18. And neither  
10 Dr. Weisenburger nor Dr. Nabhan discussed Mr. Pilliod's recurrent genital warts on direct  
11 examination, let alone explained how they were able to exclude the corresponding statistically  
12 significant risk ratio of 3.0 to 3.1. Tr. 2884:5-8; 2885:13-16; 2887:22-2888:3. Finally, Plaintiffs'  
13 experts' offhand dismissals of Mr. Pilliod's extensive history of prior skin cancers is not a  
14 reasoned explanation for excluding this significant risk factor under a proper differential  
15 diagnosis. Tr. 2783:3-13. The jury's verdict is utterly unsupported by this fundamentally  
16 unreliable specific causation testimony.

17 **2. Alberta Pilliod's PCNSL**

18 The evidence presented also does not support the jury's finding that Roundup caused  
19 Alberta Pilliod's Primary Central Nervous System Lymphoma ("PCNSL"). According to Dr.  
20 Weisenburger's own research, because Mrs. Pilliod was negative for the t(14;18) chromosome  
21 translocation, her smoking history—not her exposure to Roundup—was the most likely cause of  
22 her NHL. During trial, Dr. Weisenburger flatly admitted that people like Mrs. Pilliod who were  
23 "exposed to herbicides for more than 17 years" but were t(14;18) negative had "no increased risk  
24 of NHL." Tr. 2803:1-6. Conversely, Dr. Weisenburger's research found that people like Mrs.  
25 Pilliod who were t(14;18) negative but smoked tobacco starting before age 20 had a statistically  
26 significant *doubling* of the risk of NHL, Tr. 2815:3-18. Plaintiffs chose not to address this  
27 incredibly probative genetic evidence during the direct examinations of their specific-causation  
28 experts, and instead elected to bury it. Tr. 2807:1-4 (Q: And you knew sitting there all morning

1 that Mrs. Pilliod had a negative t(14;18) translocation; right? A. Yes). This decision to ignore  
2 genetic testing guts any reliable basis for those causation opinions as they relate to Mrs. Pilliod.

3 The evidence also clearly showed that Mrs. Pilliod had numerous other risk factors that  
4 substantially increased her risk of developing PCNSL. For instance, Mrs. Pilliod has Hashimoto's  
5 disease, which has been linked to a statistically-significant *tripling* of the risk of developing NHL.  
6 Tr. 2855:15-18; 4385:19-4387:12. Mrs. Pilliod's personal history of bladder cancer, family  
7 history of cancer, age upon diagnosis, and elevated body weight also substantially increased her  
8 risk of developing NHL. Tr. 2829:8-2831:4. And as with Mr. Pilliod, Plaintiffs' experts offered  
9 no evidence or explanation to reliably rule out idiopathic causes. As discussed above, Plaintiffs  
10 had the burden to establish that Mrs. Pilliod would not have developed PCNSL had she never been  
11 exposed to Roundup. As they did with Mr. Pilliod, Plaintiffs' specific-causation experts Drs.  
12 Weisenburger and Nabhan specifically admitted the contrary—that Mrs. Pilliod could have  
13 developed the exact same PCNSL even if she had never used or been exposed to Roundup. Tr.  
14 2788:4-11; 4168:11-23. Given Mrs. Pilliod's negative t(14;18) chromosome translocation and her  
15 numerous other risk factors, there is insufficient evidence to conclude that Mrs. Pilliod's PCNSL  
16 was caused by Roundup rather than by other or idiopathic causes which are far more likely.

17 **B. The Evidence Does Not Support that Roundup's Design Was Defective.**

18 The weight of the evidence presented at trial does not support a finding that Roundup was  
19 defectively designed. Plaintiffs' theory of design defect is based on their claim that the  
20 combination of glyphosate and surfactants in Roundup renders it defective.<sup>8</sup> But Plaintiffs did not  
21 put forth any evidence that this specific combination caused their harm; in other words, they failed  
22 to demonstrate that they would not have contracted NHL if they had used a different glyphosate-  
23 based formulation or if Roundup used an alternative surfactant. *See O'Neil v. Crane Co.*, 53 Cal.  
24 4th 335, 347 (2012) ("A bedrock principle in strict liability law requires that 'the plaintiff's injury  
25 must have been caused by a 'defect' in the [defendant's] product."); *see also Browne v.*

26 \_\_\_\_\_  
27 <sup>8</sup> The formulation's use of glyphosate, a raw ingredient, cannot form the basis for liability under California  
28 law. *See Poosh v. Philip Morris USA, Inc.*, 904 F. Supp. 2d 1009, 1025-26 (N.D. Cal. 2012); JNOV  
Motion at 10.

1 *McDonnell Douglas Corp.*, 698 F.2d 370, 371 (9th Cir. 1982); *Pooshs*, 904 F. Supp. 2d at 1025.

2 Neither Dr. Nabhan nor Dr. Weisenburger testified that the formulation, as opposed to  
3 glyphosate, caused Plaintiffs' NHL. Tr. 2891:12-15. The only expert who provided testimony  
4 about the formulation was Dr. Sawyer. And although Dr. Sawyer testified that certain surfactants  
5 are safer than the POEA used in Roundup, his testimony was far from sufficient to establish that  
6 Plaintiffs' cancer was caused by Monsanto's use of POEA as opposed to a different surfactant.  
7 Dr. Sawyer opined only that the formulation is more genotoxic than glyphosate, but genotoxicity  
8 is different than carcinogenicity. Tr. 1983:1-24. And, he also did not testify that Plaintiffs would  
9 not have developed NHL had Monsanto used a different formulation. The weight of the evidence  
10 presented falls far short of establishing that a defective design caused Plaintiffs' injuries.

11 C. **The Weight of the Evidence Does Not Support a Failure-to-Warn Because the**  
12 **Generally Accepted Science at the Time Roundup Was Manufactured, Sold,**  
**and Distributed Did Not Recognize a Risk of NHL.**

13 A new trial on the failure-to-warn claims is required because the weight of the evidence  
14 does not support that Roundup's alleged risk of NHL was "known or knowable in light of the  
15 generally recognized and prevailing best scientific and medical knowledge" at the time Monsanto  
16 distributed its Roundup that allegedly caused Plaintiffs' NHLs, and therefore did not establish a  
17 duty to warn. *Anderson v. Owens-Corning Fiberglas Corp.*, 53 Cal. 3d 987, 1002 (1991); *see also*  
18 CACI 1205. The "generally recognized and prevailing best scientific and medical knowledge"  
19 during any relevant time period<sup>9</sup> is that glyphosate is *not* a likely human carcinogen.

20 First, Plaintiffs presented no evidence that the alleged risk of NHL was generally accepted  
21 or the prevailing view at any time, much less prior to the release of the IARC assessment in 2015.  
22 Indeed, the evidence presented was all to the contrary, and even Plaintiffs' own expert witness on  
23 general causation, Dr. Christopher Portier, testified that even he did not come to the opinion that  
24 glyphosate was a carcinogen at any time prior to 2015. Tr. 1902:6-9. On these facts, the weight  
25 of the evidence does not support that Roundup's alleged risk of NHL was the "prevailing best

26 <sup>9</sup> As detailed in Monsanto's JNOV Motion, the latest possible relevant time period for Mr. Pilliod is 2011  
27 (when he was diagnosed with NHL and the last alleged use in the operative complaint), and neither  
28 Plaintiff presented evidence that any alleged exposure after 2012 was sufficient to cause or contribute to  
their injuries. *See* JNOV Motion at 7. Regardless of the time period, there is not sufficient evidence that  
the alleged risk of NHL from exposure to Roundup was the prevailing scientific view at any time.

1 scientific” view at any time prior to Plaintiffs’ NHL diagnoses in 2011 and 2015.

2 Even if the state of the science post-2015 were considered—although Plaintiffs had already  
3 been exposed to the Roundup that allegedly caused their NHL by that time—the weight of the  
4 evidence showed that Plaintiffs’ causation theory is not the prevailing or generally accepted view  
5 in the scientific community. At most, the evidence demonstrated that the IARC hazard assessment  
6 is a minority view that is not “generally accepted” and is still heavily debated in the scientific  
7 community.<sup>10</sup> After IARC published its Monograph, numerous scientific and regulatory agencies  
8 worldwide re-assessed their views, rejected IARC’s classification, and re-affirmed their prior  
9 conclusions that glyphosate is not likely to be a carcinogen.<sup>11</sup> As recently as two months ago, the  
10 EPA rejected IARC’s conclusion regarding carcinogenicity. *See* Section I.D.2, *supra*. At most,  
11 Plaintiffs presented evidence of a new, minority view in the scientific community that emerged in  
12 2015. A minority view does *not* make a risk “known or knowable” in order to require a duty to  
13 warn. *See* CACI 1205, Directions for Use. A scientific debate should be decided by scientists,  
14 and a “generally accepted view” of the scientific community represents such a decision. It should  
15 not be decided by a jury with little scientific training that is simultaneously provoked by  
16 inflammatory and prejudicial evidence.

17 **D. The Weight of the Evidence Does Not Support Punitive Damages.**

18 To recover punitive damages, Plaintiffs had to prove by clear and convincing evidence that  
19 Monsanto (through one of its officers, directors, or managing agents) committed malice,  
20 oppression, or fraud “in the conduct which gave rise to liability in the case.” Civ. Code § 3294;  
21 *Medo v. Super. Ct.*, 205 Cal. App. 3d 64, 68 (1988). As argued in more detail in Monsanto’s  
22

23 <sup>10</sup> *See, e.g.*, Tr. 2247:15-19 (Dr. Jameson testifying that scientists at ECHA, EFSA, EPA, Health Canada,  
24 and Australia disagree with him); Tr. 1900:11-1901:1 (As of 2017, no pesticide regulatory authority  
25 considered glyphosate to be a carcinogenic risk to humans); Tr. 4072:24-4073:6 (Dr. Nabhan agreeing  
26 that the question of whether Roundup is a carcinogen is one about which “reasonable people can  
27 disagree” even today). Plaintiffs may argue that IARC was a prevailing view because 94 scientists  
28 agreed with it. The fact that 94 scientists expressed agreement with IARC does not make it the  
“prevailing” view in the scientific community in light of the overwhelming disagreement with IARC by  
the world’s regulators; rather, that is the epitome of a minority view.

<sup>11</sup> *See, e.g.*, Tr. 1899:23-1900:1 (ECHA); 1900:3-10, 4082:22-4083:4 (Australian Pesticides and  
Veterinary Medicines Authority); 1900:11-23; 4075:14-20 (Health Canada); 1929:22-1930:2 (EFSA);  
1953:7-15 (EFSA & ECHA); 1970:14-16 (EPA); 4081:11-4082:6 (New Zealand).

1 Motion for Judgment Notwithstanding the Verdict, incorporated by reference herein, Plaintiffs  
2 failed to meet this burden. *See* JNOV Motion at 12-16; Section III.C., *infra*.

3 Regulators around the world, including in the U.S., Canada, Australia, the EU, New  
4 Zealand, and Japan, have uniformly concluded that Roundup does not pose a cancer risk to  
5 humans. Tr. 1894:13-1901:2; Reeves Dep. at 846:2-852:25. Monsanto’s reliance on this  
6 worldwide regulatory safety consensus was reasonable corporate conduct and nothing close to the  
7 “despicable” conduct required to support punitive damages. Indeed, Plaintiffs’ expert Dr. Nabhan  
8 acknowledged that, even today, reasonable people can disagree about whether glyphosate should  
9 be classified as a carcinogen. Tr. 4072:20-4073:2. Accordingly, the record cannot possibly  
10 support a finding of *clear and convincing* evidence that Monsanto acted with *malice or*  
11 *oppression*—simply for selling a product that expert regulators believed, and still believe, is safe  
12 for human use. Such evidence precludes any possible finding that Monsanto acted despicably,  
13 which would be inconsistent with fundamental principles of Due Process.<sup>12</sup>

14 Plaintiffs also did not present evidence of wrongdoing by Monsanto’s officers, directors, or  
15 managing agents, as required to recover punitive damages. *See* Cal. Civ. Code § 3294(b). A  
16 “managing agent” under section 3294(b) is limited to employees with “broad discretion” that  
17 “determine[] corporate policy,” *Egan v. Mut. of Omaha Ins. Co.*, 24 Cal. 3d 809, 822-23 (1979),  
18 and who “exercise[] substantial discretionary authority over significant aspects of a corporation’s  
19 business.” *White v. Ultramar, Inc.*, 21 Cal. 4th 563, 572, 577 (1999); *see also Kelly-Zurian v.*  
20 *Wohl Shoe Co.*, 22 Cal. App. 4th 397, 422 (1994) (supervisory employee is not a “managing  
21 agent” unless he also has authority to establish or change the company’s business policies).  
22 Plaintiffs provided no evidence that any witness in this case was a “managing agent.”

23 **III. THE DAMAGES AWARDS ARE UNSUPPORTED, EXCESSIVE AND**  
24 **UNCONSTITUTIONAL.**

25 The million-dollar-per-year compensatory awards and *billon* dollar punitive awards bear

26 \_\_\_\_\_  
27 <sup>12</sup> Additionally, none of the specific evidence Plaintiffs highlighted amounts to clear and convincing  
28 evidence of “despicable” conduct in which Monsanto consciously disregarded probable danger. *See*  
JNOV Motion at 13-14.

1 all the hallmarks of a runaway verdict based on passion and prejudice rather than the evidence  
2 presented and the applicable law. Both awards far exceed the evidence presented and should be  
3 vacated or substantially remitted. *See* Code Civ. Proc. § 657(5).

4           **A. The Award for Future Economic Damages to Mrs. Pilliod Lacked the**  
5           **Evidentiary Support Required Under Settled California Law.**

6           The only future economic damages sought by Mrs. Pilliod were for the prescription  
7 medicine Revlimid, and thus the entirety of the jury’s award for future economic damages is for  
8 that medication. Because Plaintiff only submitted evidence of the full “list price” for the  
9 medication and failed to provide any evidence—much less competent evidence—to support that  
10 she was reasonably certain to incur that amount, the entirety of the award for future economic  
11 damages must be vacated or substantially remitted.<sup>13</sup>

12           The evidence at trial showed that Mrs. Pilliod does not currently pay the full list price for  
13 Revlimid. *See* Tr. 3747:16-21 (testifying that she has co-payment for Revlimid); *see also* Tr.  
14 4033:12-15 (testifying that she receives assistance in the amount of \$2,100 per month from the  
15 drug’s manufacturer). She also testified that she is Medicare-eligible and has private insurance  
16 that is supplemental to Medicare. *See* Tr. 4035:10-4036:6. Under settled California law, an award  
17 of future medical expenses must be tied to the amount that is reasonably certain to *actually be paid*  
18 by the plaintiff or her insurer—not the “list price” or amount billed by the provider. *See Howell v.*  
19 *Hamilton Meats & Provisions, Inc.*, 52 Cal. 4th 541 (2011); *Corenbaum v. Lampkin*, 215 Cal.  
20 App. 4th 1308 (2013). The only evidence presented regarding Mrs. Pilliod’s future medical  
21 expenses, however, was the full list price for Revlimid.<sup>14</sup> She presented no evidence whatsoever  
22 that she or her insurer would be reasonably certain to pay that full list price for the medicine in the  
23 future. Nevertheless, the jury awarded future economic damages to Mrs. Pilliod based on the *full*

24 \_\_\_\_\_  
25 <sup>13</sup> *See also* Brown Decl. Ex. X, Monsanto’s *Sargon Mtn. to Exclude Testimony of James Mills* (2/12/19)  
and Ex. Y, Monsanto’s Bench Brief Regarding Mrs. Pilliod’s Future Economic Damages (4/22/19), both  
incorporated here by reference.

26 <sup>14</sup> Even the list price presented by Plaintiff lacked proper foundation. As this Court noted, three experts for  
27 Plaintiffs speculated as to three different “list prices,” including simply pulling the list price for uninsured  
28 customers from the website drugs.com. *See, e.g.*, Tr. 4014:18-22 (“So whatever the number is that’s been  
speculated now by three different witnesses, the highest of which is your expert, and your expert has based  
his opinion on that \$21,000 number, that’s not the number. I mean, that can’t be the number...”).

1 *list price* of Revlimid—amounting to nearly \$200,000 per year and a whopping **\$2.9 million** over  
2 the course of her projected life for this single medication. *See* Tr. 4198:15-4199:5; Alberta Pilliod  
3 Judgment at 5. Plaintiffs had the burden to present evidence upon which a jury could determine  
4 the future medical expenses that Mrs. Pilliod would likely actually incur. They did not present  
5 any such evidence, and thus the entirety of the future medical award must be vacated.

6 **B. The Awards for Noneconomic Loss Are Excessive and Unsupported.**

7 The jury awarded \$1 million per year in *both* past and future noneconomic damages to Mr.  
8 Pilliod; and \$2 million per year in *both* past and future noneconomic damages to Mrs. Pilliod  
9 (based on the life expectancies provided in Instruction No. 30). The amounts awarded are not  
10 supported by the evidence presented and are based on speculation, passion, and prejudice.

11 ***Mr. Pilliod’s Noneconomic Damages.*** The award of \$1 million per year for *both* past and  
12 future noneconomic loss are entirely untethered to the evidence presented and do not comport with  
13 the realities of Mr. Pilliod’s diagnosis, treatment, and prognosis. At the least, the \$10 million  
14 awarded to Mr. Pilliod for future noneconomic damages is wholly unsupported and cannot  
15 stand. To recover future noneconomic damages, Mr. Pilliod had to prove that he is “reasonably  
16 certain to suffer that harm.” *See* Jury Instr. No. 28; *Piscitelli v. Friedenber*, 87 Cal. App. 4th 953,  
17 989 (2001) (damages which are speculative or “merely possible cannot serve as a legal basis for  
18 recovery”). But the limited evidence introduced at trial established the contrary: Dr. Nabhan  
19 testified that, given the length of time Mr. Pilliod has been in remission, “it’s extremely unlikely  
20 that [his] disease will recur.” Tr. 3975:9-10. Dr. Raj agreed that Mr. Pilliod’s prognosis is “very  
21 good.” Brown Decl. Ex. C, Raj. Dep. at 200:20-24. As this Court noted, Mr. Pilliod’s future  
22 noneconomic damages “are constrained somewhat by th[e] evidence,” “which has more to do with  
23 the outdoor sports and sailing and things he used to do.” Tr. 4784:12-21. A 77-year-old man’s  
24 inability to play outdoor sports or sail cannot justify \$1 million per year in future noneconomic  
25 loss, particularly in light of the undisputed evidence that many of his activities were already  
26 limited by other medical conditions, unrelated to his NHL, including cognitive impairment  
27 resulting from his epilepsy. Tr. 2879:22-2883:4; 5290:20-5291:11.

28 The million-dollar-per-year award to Mr. Pilliod for past noneconomic damages also

1 cannot be squared with the evidence presented. Mr. Pilliod was diagnosed with NHL in 2011,  
2 underwent a few months of treatment, and has been in complete remission for the past seven-plus  
3 years. Ex. C, Raj Dep. 152:22-153:1, 200:3-6; Tr. 2830:17-20. The recent decision in *Bigler-*  
4 *Engler v. Breg, Inc.*, 7 Cal. App. 5th 276 (2017) is instructive. There, the plaintiff suffered serious  
5 injury after using a medical device. As a result of her injuries, the plaintiff (who at the time was a  
6 high school athlete) had to undergo additional surgeries and procedures which “left a large open  
7 wound” and left her with functional limitations. *Id.* at 288-89. The jury awarded \$68,270 in  
8 economic damages and \$5,127,950 in past and future noneconomic damages. *Id.* at 298,  
9 302. Though recognizing that the plaintiff had suffered a serious injury causing “persistent” and  
10 “substantial” pain, “extremely painful” additional procedures, a “disfiguring” scar, “highly  
11 compromised” daily activities, and “considerable emotional distress, anxiety, and embarrassment,”  
12 the Court of Appeal reversed the jury’s compensatory damages award as excessive and held that  
13 the trial court should have reduced the award or granted a new trial. *Id.* at 299, 302. The linchpin  
14 of that determination was the evidence that, while plaintiff suffered a serious injury, her “condition  
15 improved steadily and dramatically;” yet, jurors appeared to have compensated her the same  
16 amount after her condition improved as when she was in extreme pain. *Id.* at 302. This “strongly  
17 suggest[ed] the jury was influenced by improper factors.” *Id.* Here, similar to the plaintiff in  
18 *Bigler-Engler*, Mr. Pilliod underwent treatment for his NHL more than seven years ago; his  
19 condition improved after treatment; and he has been in remission for more than seven years. Yet,  
20 the jury awarded the exact same annual sum for both past and future noneconomic damages.

21 The \$18 million in noneconomic damages awarded to Mr. Pilliod also are grossly out of  
22 proportion with the economic damages awarded. “In determining whether the noneconomic  
23 damages award is excessive, [California appellate courts] compare the amount of that award to the  
24 economic damages award, to see if there is a reasonable relationship between the two.” *Major v.*  
25 *W. Home Ins. Co.*, 169 Cal. App. 4th 1197, 1216 (2009); *see also Buell-Wilson v. Ford Motor Co.*,  
26 73 Cal. Rptr. 3d 277, 308 (2008). The total noneconomic damages award for Mr. Pilliod is clearly  
27 disproportionate as it is **380 times** larger than his economic damages (\$47,296.01).

28 ***Mrs. Pilliod’s Noneconomic Damages.*** While Mrs. Pilliod underwent more intense

1 treatment for her NHL and requires maintenance medication, she, too, thankfully is in remission.  
2 She is able to perform normal daily activities like driving. Brown Decl. Ex. D, Rubenstein Dep. at  
3 79:5-12. The jury’s award of \$2 million per year in *both* past and future noneconomic damages  
4 far exceeds the evidence presented for the same reasons stated above. Even including the entirely  
5 unsupported future economic damages award which must be vacated, *see* Section III.A., *supra*,  
6 Mrs. Pilliod’s noneconomic damages award (\$34 million) is nearly 11 times greater than her  
7 economic damages award (\$3,158,876.76). When the future economic award is excluded, the  
8 ratio of noneconomic to economic damages is an even more disproportionate *169:1*.

9           **C. The Punitive Damages Awards Are Excessive, Duplicative, and**  
10           **Unconstitutional.**

11           The \$2 billion awarded in punitive damages is unconstitutionally excessive under both  
12 federal and state law and cannot stand.

13                   **1. The Punitive Damages Awards Are Unconstitutional.**

14           Because punitive damages “serve the same purposes as criminal penalties” but are awarded  
15 by juries without “the protections applicable in a criminal proceeding,” *State Farm Mut. Auto. Ins.*  
16 *Co. v. Campbell*, 538 U.S. 408, 417 (2003), due process “imposes certain limits, in respect . . . to  
17 amounts forbidden as ‘grossly excessive’” as a safeguard against excessive penalties. *Philip*  
18 *Morris USA v. Williams*, 549 U.S. 346, 353 (2007). The court must consider three “guideposts” to  
19 determine whether a punitive award comports with due process: (1) the degree of reprehensibility  
20 of the defendant’s actions; (2) the ratio between the compensatory award and the punitive award;  
21 and (3) a comparison between the punitive damages awarded and the civil penalties authorized or  
22 imposed in comparable cases. *State Farm*, 538 U.S. at 418; *accord Roby v. McKesson Corp.*, 47  
23 Cal. 4th 686, 712 (2009). When these guideposts are considered here, there can be no doubt that  
24 the award does not comport with due process and must be vacated or significantly reduced.

25           ***Reprehensibility:*** The reprehensibility guidepost reflects the view that some conduct—  
26 such as “intentional malice” and “threat[s] of violence”—is “more blameworthy.” *BMW of N.*  
27 *Am., Inc. v. Gore*, 517 U.S. 559, 575-76 (1996). “It should be presumed [that] a plaintiff has been  
28 made whole for his injuries by compensatory damages, so punitive damages should only be

1 awarded if the defendant’s culpability . . . is so reprehensible as to warrant the imposition of  
2 further sanctions to achieve punishment or deterrence.” *State Farm*, 538 U.S. at 419.

3 The evidence presented here did not come close to establishing intentional malice or  
4 reprehensible conduct. Plaintiffs did not present any evidence that Monsanto believed Roundup to  
5 be carcinogenic yet chose to market it without a carcinogenicity warning anyway. To the  
6 contrary, the undisputed facts showed that Monsanto’s determination that Roundup was not  
7 carcinogenic was in line with scientists and regulators around the globe. Plaintiffs and the jury  
8 disagreed with those decisions. But the fact that different people can have different views of the  
9 science does not make Monsanto’s conduct reprehensible or malicious. Indeed, the question of  
10 whether Roundup is carcinogenic remains a disputed question in the scientific community to this  
11 day, and Dr. Nabhan agreed that “reasonable people can disagree” about it. Tr. 4072:24-4073:6.

12 **Ratios:** The second “guidepost” focuses on the ratio between the compensatory and  
13 punitive awards. *Gore*, 517 U.S. at 580-81; *State Farm*, 538 U.S. at 425. Ratios that “exceed 9 or  
14 10 to 1” are presumptively unconstitutional. *Simon v. San Paolo U.S. Holding Co.*, 35 Cal. 4th  
15 1159, 1182 (2005); *see also State Farm*, 538 U.S. at 425. Due process permits ratios on the higher  
16 end of this scale—perhaps closer to the 9 to 1 ratio—“between punitive damages and a **small**  
17 compensatory award for **purely economic** damages.” *Simon*, 35 Cal. 4th at 1189 (emphasis  
18 added). Because noneconomic damages “may be based in part on indignation at the defendant’s  
19 act and may be so large as to serve, itself, as a deterrent,” due process requires smaller ratios—  
20 perhaps no greater than 1 to 1—between “punitive damages and a substantial compensatory award  
21 for [noneconomic damages].” *Id.* Thus, “[w]hen compensatory damages are substantial, then a  
22 lesser ratio, perhaps only equal to compensatory damages, can reach the outermost limit of the due  
23 process guarantee.” *State Farm*, 538 U.S. at 425. In *Roby*, the California Supreme Court held that,  
24 “[b]ased on the relatively low degree of reprehensibility and the substantial award of noneconomic  
25 damages” which “includ[ed] a punitive component,” a 1 to 1 ratio was “the maximum punitive  
26 damages . . . in light of the constraints imposed by the federal constitution.” 47 Cal. 4th at 718-20.  
27 Here, both the compensatory-to-punitive damages ratios and the economic-to-noneconomic  
28 damages ratios demonstrate that the punitive damages awards are excessive:

1           •       Compensatory-to-Punitive Ratio: The jury awarded approximately \$18 million in  
2 compensatory damages and \$1 billion in punitive damages to Mr. Pilliod; and \$37 million in  
3 compensatory damages and \$1 billion in punitive damages to Mrs. Pilliod. This amounts to a 55  
4 *to 1* ratio of punitive to compensatory damages for Mr. Pilliod and a 27 *to 1* ratio for Mrs. Pilliod,  
5 even before any correction for the legal errors in the future economic damages award and the  
6 excessiveness of the noneconomic damages awards. Both greatly exceed the 1 to 1 ratio *Roby*  
7 held was the constitutional maximum where, like here, reprehensibility was, at best, low and the  
8 compensatory damage award contained substantial noneconomic damages reflecting a “punitive  
9 component.” *Id.*; *see also Simon*, 35 Cal. 4th at 1182 (“Especially when the compensatory  
10 damages are substantial or already contain a punitive element, lesser ratios ‘can reach the  
11 outermost limit of the due process guarantee.’”) (citation omitted).

12           •       Economic-to-Noneconomic Ratio: The ratio of the jury’s compensatory awards for  
13 economic damages compared to non-economic damages demonstrates that the compensatory  
14 awards here include a punitive component. Less than \$50,000 of the jury’s compensatory award  
15 to Mr. Pilliod was for economic damages, compared to \$18 million in non-economic damages.  
16 This results in non-economic damages composing an extreme **99.7%** of the total compensatory  
17 award that dwarfs Mr. Pilliod’s economic damages. For Mrs. Pilliod, even including the  
18 unsupportable award for future medical expenses, the non-economic damages awarded composed  
19 85% of the total compensatory award. If the future medical expenses are excluded, that ratio  
20 jumps to **99.4%**. By contrast, the compensatory award in *Roby*—which the California Supreme  
21 Court found contained a “punitive component” requiring a 1 to 1 ratio for punitive damages—  
22 consisted of only 68% noneconomic damages. *Roby*, 47 Cal. 4th at 718-19. No punitive award  
23 greater than a 1 to 1 ratio can possibly comport with due process here.

24           •       Comparisons to Other Cases and Civil Penalties: Allowing the jury’s \$2 billion in  
25 punitive damages to survive judicial scrutiny would be unprecedented. The two largest punitive  
26 damages awards to have survived judicial scrutiny in California of which Monsanto is aware are  
27 \$55 and \$50 million. *See Buell-Wilson*, 73 Cal. Rptr. 3d 277 (depublished opinion reducing  
28 punitive damage award to \$55 million amounting to a 2 to 1 ratio to compensatory damages for

1 deficient design resulting from deliberate decisions of management); *Boeken*, 127 Cal. App. 4th at  
2 1691-1692, 1703 (remitting punitive award to \$50 million resulting in an approximately 9 to 1  
3 ratio). In *Johnson*, the Court reduced the \$289 million punitive damages award to an amount  
4 equal to compensatory damages. See *Johnson v. Monsanto Co.*, 2018 WL 5246323, at \*5 (Cal.  
5 Super. Oct. 22, 2018). At a minimum, a similar result is required here.<sup>15</sup>

6 The \$2 billion awarded is also astronomical compared to civil penalties available for  
7 similar conduct. U.S. EPA may fine Monsanto up to \$19,936 for selling Roundup with a label that  
8 “does not contain a warning or caution statement . . . adequate to protect public health.” 7 U.S.C.  
9 § 136(q); 7 U.S.C. 136j(a)(1)(E); 40 C.F.R. § 19.4 (adjusting for inflation). California can levy up  
10 to a \$2,500 penalty per day for misbranded herbicide labels. Cal. Health & Safety Code  
11 § 25249.7. Even a full year’s worth of the maximum daily fine is approximately \$912,000. The  
12 punitive awards here equal approximately 2,192 years of such fines at the maximum amount.

13 **2. The Punitive Damages Awards Punish Monsanto Multiple Times for**  
14 **the Same Conduct and for Conduct Unrelated to Plaintiffs’ Harm.**

15 Punitive damages are not intended to compensate a particular plaintiff, but instead are  
16 intended to deter and punish the defendant. The punitive awards here should be vacated or  
17 substantially reduced because they represent and risk multiple punishments for the same conduct.  
18 California courts recognize that a punitive award may need to be reduced due to the risk of  
19 multiple punishments for the same conduct: “judicial control in the form of a remittitur, provided  
20 the reduced amount is adequate to deter the criticized conduct, is proper where there is the  
21 likelihood of several jury-imposed punitive damage awards . . . .” *Delos v. Farmers Grp., Inc.*, 93  
22 Cal. App. 3d 642, 667 (1979) (affirming remittance of punitive award based upon similar actions  
23 pending and likelihood of multiple judgments involving same conduct).

24 Here, Monsanto was punished twice *in the same case* based on the same purchases of the  
25 same product and the same evidence regarding its alleged conduct. Moreover, the prospect of  
26 multiple jury-imposed punitive awards against Monsanto for Roundup cancer claims is not merely

27 \_\_\_\_\_  
28 <sup>15</sup> However, as discussed *infra*, an even greater reduction than that applied in *Johnson* is required here  
because the punitive awards result in multiple punishments for the same conduct.

1 likely—it has already occurred. Prior to the verdicts in this case, two other Roundup cases in the  
2 last year resulted in the imposition of punitive damages against Monsanto, and the type of  
3 evidence on which Plaintiffs rely is nearly identical. Those awards currently total more than \$114  
4 million.<sup>16</sup> And in this large serial litigation, Monsanto also faces many thousands of additional  
5 lawsuits around the country and could be punished again many times over for the same conduct  
6 concerning the sale of Roundup. *See Johnson v. Ford Motor Co.*, 35 Cal. 4th 1191, 1209 (2005)  
7 (rejecting punitive award due to multiple punishment problem); *Delos*, 93 Cal. App. 3d at 666-67.

8 Finally, the extreme sum of punitive damages awarded, combined with the fact that the  
9 same sum was awarded for each Plaintiff despite significant differences in the applicable time  
10 periods, leaves little doubt that the amount awarded impermissibly reflects punishment for conduct  
11 unrelated to each Plaintiff's harm. *See State Farm*, 538 U.S. at 422-23; *Medo*, 205 Cal. App. at 68  
12 ("Punitive damages are not simply recoverable in the abstract. They must be tied to oppression,  
13 fraud or malice in the conduct which gave rise to liability in the case."). As explained in section  
14 I.A *supra*, Plaintiffs' counsel expressly encouraged the jury *not* to tether a punitive damages  
15 award to the specific conduct at issue for each Plaintiff's alleged harm, but rather to punish  
16 Monsanto "for 45 years of lying to the public..." which represents the entire time that Roundup  
17 has been on the market through today. *See* Tr. 5604:16-21.

## 18 CONCLUSION

19 The verdicts in this case do not reflect an impartial, considered evaluation of the evidence  
20 presented; they reflect the culmination of weeks of calculated effort by Plaintiffs' counsel to  
21 obscure the facts and engender deep passion and prejudice through the use of irrelevant evidence  
22 and inflammatory argument. The multi-billion dollar award is unhinged from the evidence and  
23 from due process. A new trial is required.

---

24 <sup>16</sup> The award in *Johnson* is currently on appeal by both parties. Earlier this year, a federal jury in California  
25 awarded \$75 million in punitive damages in the *Hardeman* case. Monsanto has moved to vacate or remit  
that award.

26 Although Monsanto contends that the evidence on punitive damages should be limited to the specific  
27 conduct that allegedly caused an individual Plaintiff's harm, Plaintiffs' counsel in all three cases (*Johnson*,  
28 *Hardeman*, and *Pilliod*) have presented essentially the same punitive damages case, arguing that Monsanto  
manipulated data and continues to sell Roundup to this day despite knowing that it causes NHL. The result  
has been repeated punitive damages awards for the same alleged conduct.
